## $\rightarrow$ Work with $\mathbf{2}$ or $\mathbf{3}$ other people ... your group must agree on all answers!

## A. Multiplying and Dividing - Factors with the Same Base

Show how to do each problem the long way and then the short way; the first one is done for you.

Example: 1. $8 x^{3}(2 x)$
2. $-4 a^{2} b\left(3 a^{4} b^{2}\right)$
3. $5 w z^{0}\left(4 w^{6} z^{3}\right)$

Example: 4. $\frac{4 x^{6}}{8 x^{2}}$

Long Way
$\frac{2 \cdot 2 x x x x x x}{2 \cdot 2 \cdot 2 x x}=\frac{x x x x}{2}=\frac{x^{4}}{2}$
Short way
$8 x x x(2 x)=16 x^{4}$
$2 \cdot 8 x^{3+1}=16 x^{4}$
$\qquad$
$\qquad$
五
$\qquad$
$\frac{x^{6-2}}{2}=\frac{x^{4}}{2}$
5. $\frac{15 a^{3} b^{2}}{3 a^{2} b}$
6. $\frac{12 m^{2} p^{8}}{4 m^{6} p^{2}}$

## B. Power of a Term

Show how to do each problem the long way and then the short way; the first one is done for you.
Long Way
Example: 7. $\left(3 x^{4}\right)^{2}$

$$
3 x^{4}\left(3 x^{4}\right)=9 x^{4+4}=9 x^{8}
$$

Short way
$9 x^{2(4)}=9 x^{8}$
8. $\left(-3 k^{4}\right)^{3}$
9. $\left(5 a^{2} b\right)^{4}$

## C. Three Rules

Multiplying, factors (same base): Keep the base, $\qquad$ the exponents

Dividing, factors (same base): Keep the base, $\qquad$ : like this TOP exponent minus $\qquad$
Power of one term: (A) Each factor inside raised to the power
(B) $\qquad$ the exponent on each factor by the power
